

Week 3 Quiz

LATEST SUBMISSION GRADE

100%

1. What is a Convolution?

1 / 1 point

- ☐ A technique to filter out unwanted images
- ☐ A technique to make images smaller
- ☒ A technique to isolate features in images
- ☐ A technique to make images bigger

✓ Correct

2. What is a Pooling?

1 / 1 point

- ☐ A technique to isolate features in images
- ☐ A technique to make images sharper
- ☒ A technique to reduce the information in an image while maintaining features
- ☐ A technique to combine pictures

✓ Correct

3. How do Convolutions improve image recognition?

1 / 1 point

- ☒ They isolate features in images
- ☐ They make the image smaller
- ☐ They make the image clearer
- ☐ They make processing of images faster

✓ Correct

4. After passing a 3x3 filter over a 28x28 image, how big will the output be?

1 / 1 point

- ☐ 25x25
- ☐ 31x31
- ☐ 28x28
- ☒ 26x26

✓ Correct

5. After max pooling a 26x26 image with a 2x2 filter, how big will the output be?

1 / 1 point

- ☐ 26x26
- ☒ 13x13
- ☐ 28x28
- ☐ 56x56

✓ Correct

6. Applying Convolutions on top of our Deep neural network will make training:

1 / 1 point

- ☐ Faster
- ☐ Slower
- ☐ Stay the same
- ☒ It depends on many factors. It might make your training faster or slower, and a poorly designed Convolutional layer may even be less efficient than a plain DNN!

✓ Correct
